

# Null Lens & Null Target

FOR PERFECT FOCAL FLANGE DISTANCE

# Null Lens & Null Target

VERIFY OR ADJUST THE FOCAL FLANGE!

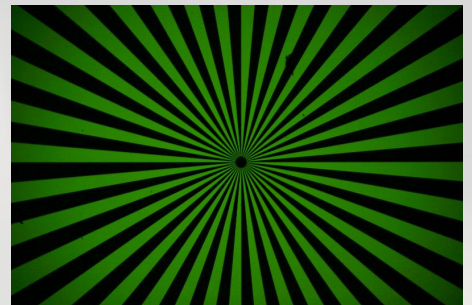

## NULL LENS

This high aperture lens has been realized to verify and/or adjust the focal flange of the RED One camera within 5 micron.

The setup ideally works at a Chrosziel collimator setup.

Alternatively:

Look at infinite distant object and adjust your back flange of the RED One camera.

## NEW! NULL TARGET

Null Target mounts to the front of the Null Lens and projects a focusing screen that is set to infinity.

The whole unit is small, lightweight, internally powered, reliably accurate and easy to use.
